

## Advantages and Characteristics:

**Excellent jaw crusher:** long service life, high fatigue resistance, stronger shock resistance, unique cavity design, high production capacity and low energy consumption.

**Quick transition:** easy to transport, wireless remote control walking, fast transition, good passability, and can adapt to various complex construction environments such as mountains and wetlands.

**Main features:** It is suitable for stones with medium to high hardness and high corrosiveness. The crushing ratio is small, but it is easy to produce needle-like broken materials.
