

Advantages and Characteristics:

Sturdy structure: modular design, easy to replace, high fatigue resistance, stronger impact resistance.

Time-saving and high-yield: impact, shock, hit (rock-on-rock) crushing functions are complete, the production efficiency is high, the wear of the machine parts is small, and the comprehensive benefits are remarkable.

Main features: It is suitable for stone materials with medium and low hardness and low corrosion resistance. It has a large crushing ratio and good particle shape of crushed materials, but produces relatively more powder.
